Welcome to the bE-aware Project: Empowering European Youth for a Safer Digital World

The bE-aware Project is dedicated to equipping European youth with essential skills and knowledge to navigate the digital landscape safely. Our commitment to creating safer online spaces is rooted in addressing **Online Sexual Exploitation and Abuse (OSEA)** through innovative educational materials and robust community involvement.

Through our efforts, we aim to foster a generation of young people who are aware, informed, and proactive in promoting safe online behaviours.

Project Goals and Results

- Transforming Youth Safety: We are reshaping the way youth approach digital safety by empowering them with tools to recognize and combat OSEA.

 - Empowering Youth and Organizations Through Innovation: bE-aware promotes collaboration between youth and organizations, fostering a network that supports ongoing digital safety education and awareness.

bE-aware Toolkit: A Resource for Change

Central to our mission is the bE-aware Toolkit—a comprehensive resource designed to support youth workers, educators, and organizations in preventing and addressing OSEA. The Toolkit includes educational modules, training materials, and interactive tools crafted to enhance understanding and promote a safer online environment. Developed with input from experts across various sectors, this Toolkit represents a critical step toward empowering youth to protect themselves and their peers.

Youth Engagement and Awareness Campaigns

The project emphasizes active youth involvement through workshops and an Interactive Mobile App that helps young people recognize online risks and take informed action. Our awareness campaigns, crafted by and for young people, encourage responsible digital behaviour and foster a sense of community advocacy

against OSEA. By combining storytelling, digital media, and interactive content, we engage youth in meaningful ways that promote a culture of safety and resilience.

The bE-aware Project commenced on January 1, 2024, and will conclude on December 31, 2025. Through ongoing efforts, we continue to drive awareness, foster collaboration, and pave the way toward a safer digital experience for the next generation.
